

DANGER!

NEVER UNSCREW THE CYLINDER FROM THE VALVE

IF YOU ARE USING A REFILLABLE CO₂ CYLINDER TO POWER YOUR PAINTBALL MARKER YOU MAY BE AT RISK OF CAUSING SERIOUS INJURY OR DEATH TO YOURSELF OR OTHERS!

You are at risk if any of the following has occurred:

- The valve unit was replaced or altered after purchase
- An anti-siphon device was installed
- The valve unit was removed from the cylinder for any reason
- Any modification was done to your Refillable CO₂ Cylinder!

YOU ARE AT RISK EVEN IF YOU PURCHASED A NEW OR USED REFILLABLE CO₂ CYLINDER!

The valve is intended to be permanently attached to the CO₂ cylinder. However, there have been numerous reported incidents causing serious injuries or death that were caused by a player unknowingly unscrewing the valve from the CO₂ cylinder. This usually occurs when the player thinks the entire valve-cylinder assembly is being unscrewed from the paintball marker.

DON'T TAKE A CHANCE!

IMMEDIATELY BRING YOUR REFILLABLE CO₂ CYLINDER TO A "C5" CERTIFIED AIRSMITH FOR INSPECTION OR CONTACT THE MANUFACTURER FOR A LOCATION WHERE THIS INSPECTION CAN BE COMPLETED.

Locate a C5 Certified Airsmith at www.paintball-pti.com/search.asp
